Stepan Kvetensky

SDET Architect at Accolade, Inc.

5 people have recommended Stepan

"I have been working with Stepan for about 5 years in Concur. Last years he has been leading Automation Framework team and I have been in a team who actively use this Framework. Stepan is a very strong technical DevOps engineer, I can recall dozens of challenging problems and issues he was always able to solve fast, his ability to focus on deep details and find out 'brand-new' solution is amazing. He is always able to contribute with very helpful and valuable information into any technical discussion; he finds the most efficient and modern ways and strategies to solve problems: when Stepan is on board, you can be sure that the most proper solution will be found and implemented. Stepan is hard working, responsible, passionate, and analytical-thinking. Moreover, he is a great lead: friendly, calm, positive, motivating, you never feel stupid when you ask questions from Stepan; he has excellent communication and presentation skills. I won't continue to describe how much Stepan did for Concur, he is one of this key players in whole Automation Org who is always going above and beyond, I will just say that I would keep working with him as long as possible."

— **Katsiaryna Piotukh**, *Software Design Engineer / Test I-III, Concur Technologies*, worked directly with Stepan at Concur Technologies

"Stepan was my mentor and supervisor in Automation Framework Team during my internship in Concur. He has great technical, analytic and communication skills as he could always introduce me to any new task with ease. I learned a lot from him not only about development and testing, but also about team leading by observing him daily - he is very professional but still friendly, easy to approach and open to discussion. I can recommend Stepan to any technical lead positions as it was truly joy to work under his supervision. "

— **Patrik Staš**, *Intern in Automation Platform Team, Concur*, reported to Stepan at Concur Technologies

"Stepan is one of the best professionals I have ever met during my professional life! He is a key player at Concur, without any doubts. He has done a tremendous work during his transition from a "tester" role to a "developer" role at Concur. And he is even more than that. Stepan has a strong analytical thinking, sense for a detail, huge knowledge about the different frameworks and about the SDLC at all. Moreover, he is a nice guy, friendly, propagating healthy lifestyle as well ;-). I really recommend once you hired him to don't let him left the company, as he is the best choice you can wish for your company to rocks!"

— **Dvořák Aleš**, *SW Design Engineer Senior, Concur (Czech), s.r.o.*, worked with Stepan at Concur Technologies

"Stepan is one of the most professional and enthusiastic fellow I worked with. I know him very well from several projects under testing department and I saw his growing from junior to senior level in very short time. He has excellent technical and communication skills and he is nice colleague too. Stepan is independent and very responsible person."

— **Vladan Kukol**, managed Stepan at Adastra

"I worked with Stepan in GE Money Bank when I was in charge of UAT coordination of the Euro implementation in Slovakia. Stepan provided a great methodological support to all the UAT test analysts and testers. He mastered the HP Quality Center and he helped all of us to get the maximum out of the tool. I was very much impressed by the detailed knowledge of the enterprise application development life cycle that Stepan effectively used to make things happen as needed, while he was able to patiently talk to less experienced team members hence helping them to reach the target. The business knowledge and experience he gained on other projects made him a perfect and reliable troubleshooter. I can warmly recommend Stepan to whatever software development or testing project that makes use of his experience, knowledge and communication excellence."

— **Jan Petrzilka**, worked directly with Stepan at Adastra
